Experience

FDJ UNITED
Boulogne, France

Freelance Software Engineer — *December 2024 - Present*

Staffing / Project Team: 11 people
Context: FDJ UNITED is La Française des Jeux, a French lottery and sports betting company.
I work on the development of games and tickets for FDJ United's international lottery partners.
Tech Stack: **NodeJS, TypeScript, Algorithms, Geometry, Statistics**

Midgard
Paris/Ajaccio, France

Freelance Fullstack Engineer — *March 2023 - August 2024*

Staffing / Project Team: 4 people
Context: Midgard is a ~10-person GreenTech start-up offering innovative solutions to address natural hazards, save lives, and protect natural and urban spaces.
I worked on the fullstack development of a forest and urban fire detection application (real-time AI smoke detection, fire mapping, alert management, camera streaming, media management, user management — mainly firefighters). I also mentored junior profiles.

- Microservices architecture
- General design from scratch, project initialization, story development and optimizations
- Project quality: integration / unit tests (50% coverage), 2-reviewer code reviews
- Collaboration with business stakeholders: requirements gathering, story writing, documentation
- Pre-sales and technical follow-up with clients
- Project management: meeting facilitation, business workshops, planning and tracking
- Bug fixes, optimizations, and feature development
- Agile organization: 2-week sprints, Scrum methodology, ceremonies, JIRA
- Technical documentation (API docs, release notes automation, etc.)
- Functional / technical presentations during company reviews and client meetings
- Proof of Concepts (POCs)

Tech Stack: **NodeJS, NestJS, Angular, TypeScript, Mongoose, Jest, MongoDB, RabbitMQ, REST API, Websocket, Python, Docker, Kubernetes, AWS, Jira, Bitbucket, GitLab, Visual Studio Code, Linux, AI, TensorFlow, Image Processing**

Lemonway
Paris, France

Freelance Fullstack Engineer — *April 2022 - January 2023*

Staffing / Project Team: 7 people
Context: Lemonway is a ~150-person Fintech scale-up offering payment solutions for marketplaces (B2B, B2C and C2C), crowdfunding platforms, and corporates requiring payment and fund collection services within a secure, regulated framework (KYC).
I worked on the fullstack development of the application used by analysts to process and verify tens of millions of Lemonway users (client/merchant identification, anti-financial crime and anti-money laundering).

- Microservices architecture
- Fullstack development
- General design, story development and optimizations
- Project quality: integration / unit tests (90% coverage), 2-reviewer code reviews, SonarQube, 0 warnings, 0 messages
- Collaboration with PO: requirements gathering, story writing, global documentation in Notion
- Project management: PPP-format meeting facilitation, business workshops, planning and tracking
- Bug fixes, optimizations, and feature development
- Agile organization: 2-week sprints, Scrum methodology, ceremonies, JIRA
- Technical documentation (API docs, release notes automation, etc.)
- Functional / technical presentations during company reviews and client meetings
- Proof of Concepts (POCs)

Tech Stack: **NodeJS, NestJS, VueJS, Sass, TypeScript, Mongoose, Jest, MongoDB, Mongo Atlas Search Index, RabbitMQ, REST API, Websocket, Docker, SonarQube, AWS, Jira, GitLab, Notion, Visual Studio Code**

Transway

Nantes, France

Fullstack Engineer, Data Scientist

February 2020 - February 2022

Engineer on multiple projects at Transway, a 25-person start-up promoting eco-mobility. Projects aimed at boosting the use of public transport, cycling, carpooling and walking. I worked on the development of a multi-tenant PaaS for loyalty programs around a movement tracker, R&D on MaaS (Mobility as a Service), mentoring of junior profiles, and the implementation of data management, processing and visualization/reporting for all Transway projects.

- Application design (architecture documents, workshop facilitation with teams)
- Frontend development (VueJS, Sass, TypeScript)
- Backend development (NodeJS, NestJS, TypeScript, pm2, PostgreSQL)
- Unit/integration tests (Cypress on frontend, Jest for backend, integration into deployment pipelines)
- Application maintenance (fixes, hotfixes, alert management)
- CI/CD design and maintenance (pipelines, cloud)
- Server management
- Technical documentation (API docs, release notes automation, etc.)
- Pre-sales and technical follow-up with clients
- Functional / technical presentations during company reviews and client meetings
- Technical mentoring of apprentices, interns, and juniors
- Proof of Concepts (POCs)
- Data needs assessment for the company
- ETL setup (Apache NiFi)
- Import and processing via ETL into an AWS S3 data lake for all projects (10 databases)
- Data model design
- Connection of a data visualization tool to the data lake (Tableau)
- Creation of real-time KPIs

Tech Stack: **NodeJS, TypeScript, NestJS, VueJS, Sass, Pm2, PostgreSQL, TypeORM, MongoDB, Mongoose, MySQL, Cypress, Jest, Sentry, Docker, Bitbucket-pipeline, GitLab CI, Linux, OVH, Clevercloud, Apache NiFi, Amazon S3, Amazon Athena, Tableau**

Airbus Defense and Space

Elancourt, France

Software Engineer

October 2018 - February 2020

Backend developer and integrator on the **Massive Intelligence** project. International project with 10 other teams in Agile mode. The project aims to consolidate all intelligence services on a single platform (Open Source, Satellite Imagery, Intelligence...). Data is ingested, processed and visualized via microservices. The product is deployed in the cloud or on-premise depending on client needs.

- Design and development of backend services
- Task management, processing chain management, user management, SSO, REST API services to interface proprietary services with the UI, report generation via an online editor
- Documentation writing: design documents, API, requirements, release notes, licenses, architectural documents
- Integration of developed and dockerized services on a development platform, Ansible and Terraform scripts to automate deployment, continuous delivery with Jenkins based on tests on a platform rebuilt daily
- Maintenance of developed services, updates and bug fixes in line with evolving requirements
- Integration of proprietary tools on the platform: NiFi, Dataiku, MongoDB, Kafka, ELK, Minio S3...
- Unit/integration test writing: delivery test scripts called during continuous delivery
- Support for other teams on Docker, Ansible scripts, and Java
- POC around a Cassandra cluster (Datastax suite, Cassandra, Spark)
- Videos and slides about the platform, live platform demos to sales, marketing and POs

Tech Stack: **Java, Spring Boot, Microservices, Docker, NiFi, Dataiku, MongoDB, ELK, Minio S3, Postman, Unit Tests**

Banque de France

Paris, France

Data Engineer (Internship)

March 2018 - September 2018

Implementation of new **Big Data development guidelines** from the Banque de France's application expertise unit for all future projects requiring them. Installation and onboarding of an HDP cluster. Following various POCs and project audits, a Big Data architecture covering the majority of projects and its technological ecosystem were established with internal support at the Banque de France.

- Configuration and administration of a Hortonworks distributed Hadoop cluster with 10 nodes (Ambari, version upgrades, high availability, node addition, decommission and recommission)
- Hadoop technology management: HDFS, MapReduce, YARN
- Participation in code audits on large Big Data projects
- POCs and standards writing for Sqoop, Hive, Spark, HBase

Tech Stack: **Hadoop, HDFS, MapReduce, YARN, Sqoop, Hive, Spark, HBase**

KMUTT Research Laboratory *Bangkok, Thailand*

Software Engineer (Internship) *March 2017 - September 2017*

Development of a fuel delivery application. The goal was to work on street mapping in Bangkok, with an easy-to-use application. The app connects a delivery driver with a user, featuring real-time geolocation of the delivery.

- Development management and relevant technology choices for the project
- Frontend and backend design and development
- Delivery of a reliable solution to the laboratory and application deployment

Tech Stack: **Android Studio, Firebase, Java**

Skills

Software Architecture	Fullstack Development, Data Science, Microservices, User Experience, User Interface
Programming Languages	JavaScript, TypeScript, Python, Java, Bash
Frameworks	NestJS, ExpressJS, VueJS, Angular, React, Spring Boot
Databases	MongoDB, PostgreSQL, SQL, Redis
Data	NiFi, ETL, Dataiku, ELK, Tableau, Data Science
Engineering Practices	DevOps, Agile, UI First, TDD
Technologies	NodeJS, Linux, RabbitMQ, Websocket, Docker, Git, Kubernetes, Ansible, NPM, Virtualisation
Soft Skills	Autonomy, Tech Sales, Challenge, Management, Communication, Conflict Resolution, Active Listening

Education

ESIEA *Paris, France*

Graduate School of Digital Engineering *September 2013 - March 2018*

- **Software Architecture, Big Data, Financial Computing**

TOEIC *Paris, France*

Professional English Assessment *2018*

- **940/990**

Lycée Notre Dame *Le Mans, France*

Scientific Baccalaureate *2012*

- **Specialty: Physics-Chemistry, Music option**

Hobbies

Guitar, Boxing, Tennis, Chess, Poker, Science Fiction
